

The FW-300-M™

New for 2013

High Capacity Purification

The FW-300-M™ is a versatile system that provides high volume filtration in an easy to transport package. Dual Zeonic™ filtration and 40mj UV disinfection allows this system to out perform any other 5 gpm unit available.

The FW-300-M™ is designed to function in both fixed facility and field operations. Mounted in a ruggedized, wheeled transport case, it is easily moved by a single person. It can be rapidly deployed around a hospital or campus as well as transported during emergencies to support field hospitals or base camps.

The innovative *First Water 40™* treatment system is at the core of the FW-300 and has been proven effective against microbiology as small as 0.019 microns. The First Water 40 treatment system is effective against viruses, bacteria and cysts in fresh water sources and has been independently certified to both civilian and DoD standards for emergency water purification.

Purchasing Options

- *Stand Alone Equipment*
- *Deployment Groups™*
Just what is needed to support an individual treatment/distribution point. Includes:
 - FW-300-M Bundle *plus*
 - Supply Station 300™
 - AquaBags™
 - Generator

Advanced Water Purification

- Specifications
- Water Source: Fresh
 - Purification Rate: 5 gpm
 - Pump: Onboard
 - Power: 12 VDC / 120 VAC
 - Amperage: 19 amps
 - Dimensions: 31 x 24 x 17 in
 - Weight: 105 lbs
 - 4 Tier Zeonic Filtration
 - UV Dose Exceeds 40mj/cm²
 - Produces microbiologically safe water for human consumption
 - GSA Contract #GS-07F-0595T
